## Breaking Barriers with Carbon/PEEK Implants in the Treatment of Spinal Tumors and Metastases

icotec is a global leader in the development of implants made from Carbon/PEEK composite material, used in the treatment of spinal tumors and metastases. The nonmetallic, radiolucent BlackArmor® material, developed by icotec, has been successfully implanted for over 15 years. By decreasing artifacts on CT & MRI, delineation of tumor from healthy tissue is greatly improved and facilitated. Radiotherapy planning is optimized and allows for higher and more accurate dose delivery to the tumor volume and reduced toxicity to organs at risk. Postoperative surveillance for tumor recurrence is assured by low-artifacts MR imaging.

**Date:** Tuesday, May 24, 2022

**Time:** 19.00 - 20.00 CET

**Speakers:** Dr. Armando Gisep, VP Clinical Research, icotec ag  
Stephen Mitchell, International Sales Manager, icotec ag

**JOIN US:** Join our session [here](#)  
Meeting-ID: 846 1036 4059, Code: 310830
