at Eurospine 2022"

Spinal treatments with a view

Wednesday 19th October
18:00 hrs

Alto Ristorante Privat Dining
Largo Augusto 1/A Milano

InSpine

Talking Dinner®

Program

Visibility is key in treating spinal disorders. It is an important factor in obtaining clinical success in surgical as well as in conservative treatments, as having access to accurate information is fundamental to make the right decisions. In spine surgery it relates to the overview and detailing of the operation field, but also depends on the characteristics of applied implant materials that influence imaging and additional treatment options. This Talking Dinner program is dedicated to these two added values in optimizing spinal surgery, being the advantages of Full Endoscopic Spine Surgery as well as applying PEEK/Carbon implants for cancer patients with spinal disorders.

Jorrit Jan Verlaan, MD PhD
Professor Orthopedics and Spine Surgeon UMC Utrecht Netherlands

The value of PEEK/Carbon spinal implants in the treatment of cancer patients.

Shukri Demir, MD
Neurosurgeon Martini Hospital Groningen Netherlands

A practical introduction into the full endoscopic spine surgery.

Innovation is a solution to a problem we all have accepted
